

KRANTHI DHARMI SAHITYA THE SCIENCE OF REVOLUTIONS

A continuous flow of powerful literature dealing with the science of revolutions flowed from the pen of the great revolutionary visionary Pandit Sriram Sharma Acharya who was wisdom personified (Pragya Purush) one year before his "Mahaprayaan" (1989 – 1990) which has now become famous as Kranti dharmi sahitya. According to our most adorable Parama Pujya Gurudev (Pandit Sriram Sharma Acharya) himself these 20 books are – "The seeds of my "THOUGHT REVOLUTION" (Vichara Kranthi). If even a few of these seeds are scattered they will shake the people out of their slumber. They will change the map of the world."

If the whole literature of the YugaRishi written in His entire lifetime dealing right from the art of living to very deep philosophical intricacies, social restructuring, scientific religion etc., be placed on one side of the scales and if these 20 books written following the style of aphorisms (heavily condensed *Thought - Capsules*) of the sages be placed on the other, these will outweigh them. Param Pujya Gurudev, the founder of Gayatri parivar has given clear instructions that anyone can print and distribute this priceless literature at printing cost following the norm of "No profit – No loss". One who distributes this great literary treasure reaps Punya (merit) according to the extent of his devotion.

21st CENTURY – THE ADVENT OF BRIGHT FUTURE – Part 1

Time has gained tremendous acceleration. That which nature has developed in lakhs and lakhs of years is now condensed to a period of a century – the 20th century and then the two decades of the transition period 1980 – 2000AD where destruction dominated.

What we have achieved in the name of development must be analysed very carefully:

1. Industrialization – Air pollution and water pollution
2. Nuclear power – Increase in radiation and related problems – Even without third world war, the future generations may be completely handicapped.
3. Over use and misuse of energy – Global Warming – Hole in the Ozone layer.
4. Chemical fertilizers and insecticides – Effect on earths fertility
5. Mining, metallurgical and rigging operations – Complete depletion of metal and oil resources.
6. Sound Pollution – Effect on Mind.
7. Education – Only for earning livelihood – No relation to culture, civilization and human values.
8. Food – only for taste and not as a mind builder and Etheric body developer.
9. Extinction of Animals, Birds and Trees

- THE ENDANGERED EARTH

The two decades of constructive development i.e. from 2000 to 2020 can be perceived by those who have their eyes open.

21st Century and the views of prophets -

The great thinkers of the world, astrologers and people with extra sensory perception and the wise(Maneeshi) men are all accepting that the time of era -change (Yug Parivartan) has come. According to all of them, the time between 1989 and 2000 is the period of Yugasandhi, the period of the transition between two eras.

The basis of all these prophecies can be divided into 4 groups.

1. Depending upon the words of intuition of persons with extra sensory perception – Nostradamus 1503 – 1559, Sri Aurobindo, Swami Vivekananda, Professor Harrer, Jean Dixon, Mother Shipton, Schopenhauer etc.,

2. Based on astrological predictions – 12 year cycle for changes, 1989 - 2000
3. The descriptions of future given in Puranas, Quran, Bible, Gita, Ramayana, Srimad Bhagavata and other religious books.
4. The results extrapolated from the data collected by various scientific methods which is now becoming the science of future or Futurology - Gunther Stunt, Fritjof Capra, Alvin Toffler etc.,

Determined attempts (*Sankalpith Prayaas*) for the bright future – Shantikunj the role model of thought revolution

Tremendous powerful energy currents are coming down to earth from inter-galactic sources reaching their peak on 24th Dec 2007. Many will be moved by these terrific inspirations and education will move from instinct (Past) - intellect (Present) - Intuition (Anthahsphurana – Pragya mandali – Wisdom Schools) which will result in unimaginable developments thus making a heaven of Earth within these few years of transition period.

The selection of place and time are of tremendous importance. Shantikunj has been selected because it is situated in the lap of mother Ganges, under the shadows of the great Himalayas, the place where the 7 Rishis performed their *Tapas*, the nearness and protection of divine personalities and energies, Akhanda Deep and a place where continuous Japa and Yagna are being done makes this place unique. Such a place cannot be found elsewhere.

To fulfil the needs of the present situation, 3 clear steps have been formulated so that YugManeesha can take up the task of building up the new era.

1. To take the YugChetana (Era Consciousness) into the minds of the people moulding public opinion in this direction – This is achieved by powerful writings which enable people to understand MahaPragya (Great Wisdom) – Writings – Readers and practitioners (*Patak aur sadhak*)
2. Tremendous speakers who can make people understand the truth and act accordingly – Sahyogi and Karyakarta.
3. Depending on their talent (Prathibha), intensity (Prakharatha) and authenticity (Praamanikatha) they become a live model for others to follow. In a way they become leaders of the new era – Prashikshit karyakarta.

In all era changing revolutions, these are the three factors which play a very very dominant role.

In this context of writings or developing literature (*Lekhani*), giving inspiring lectures (*vaani*) and training (*Prashikshan*) it should be remembered that these ideal propositions must be put forward by such

persons whose actions and activities follow what they teach. Their authenticity and intensity should be perfect so that none can lift a finger of acquisition towards them. Then only can the wheels of thought revolution (Vichara Kranthi) can move forward even though it may be of small size and of very slow speed.

1. WRITINGS – Lekhani -Hindi Akhanda Jyothi – Started about 50 years back has a membership of 3 lakhs (April 1999).

Hindi Yug Nirman Yojana – Started 27 years back, 70,000 memberships.

Gujarathi Yug Shakthi – 150,000 members

Yug Shakthi also in Marathi, Oriya, Tamil and Telugu.

Thus we have about 500,000 magazine membership and each magazine is read by at least 10 people. Thus we have 50 lakh people whose minds are reached every month and more than 3000 books have been published on all problems of life and giving their solutions on No Profit – No Loss procedure.

2. INSPIRING SPEECHES – Vaani -One month YugaShilpi Satr, 9 day Sanjeevani Vidya Satr – Till now more than 5 lakh have been trained.

3. TRAINING – Prashikshan -Those who are influenced by the mission activities give a minimum of one hour per day (Samayadaan) and one rupee per day (Amshadaan). Many give their entire life for the cause.

Mahapurnahuthi Book series – 2

21st CENTURY – THE ADVENT OF BRIGHT FUTURE – Part 2

The emergence of the new power – The fourth power

All of us know the supremacy of the three powers -

1. The power of intellect (Saraswathi)
2. The power of administration (Kali)
3. The power of money (Lakshmi)

To dominate these three, the fourth power is emerging which is known as intensified talent (Prakhara prathibha). Normal talent amasses wealth and many followers but all these are utilized for selfish aims. Here the word intensified is used as highly developed idealism. Saints and reformers belong to this category. These are also known as Ojasvi, Tejasi, mansvi, Varchasvi, Mahamanav or YugPurush.

These are different from others because of their high level emotional attitudes. In them are found Shraddha, Pragya and Nishta. People with

intensified talent think of the problems of the people and plan to solve them.

THE DETERMINED POSSIBILITIES OF MAHAKAALA

- Starting from 19th century till the last decade of 20th century, time had moved very fast. What has not happened since thousands of years happened in this period in the fields of science, medicine, education, industrialization, manufacturing items of war, many social and political revolutions.

Depression must go

The most important factor that is to be eliminated from the present state of affairs is to remove depression in all fields. This is only possible when one can imagine a bright future and an expansive and sustained effort must be carried out to instil it in public.

- Leadership of Hanuman
- Lifting Govardhana mount
- Joan of Ark
- Lenin
- Buddha
- Gandhi
- Arjun
- Leaders of various cults

Are examples wherein despair and depression is replaced by a tremendous surging hope of guaranteed victory in their followers. A similar time has now come wherein the hope of a bright future is to be kindled in every heart.

Great revolutions in the last century –

The present great revolution coming in this 21st century can be traced since long time back.

Political –

- Freedom from the last 2000 years of slavery
- 2 world wars

Social –

- Abolition of slavery
- Women and the sudras are becoming free

All these changes have occurred in the 20th century though they had their roots since thousands of years.

Even though one cannot say definitely about the future because man is the creator of his destiny and he can make or mar it but still if we cannot have an idea of the future we can never think and act on any important issue. This is the time of a great revolution and a change of the era.

- The negative aspects of 20th century will be balanced and positive effects will be taking active shape in the 21st century. That 21st century is the advent of bright future is confirmed by many seers, astrologers and futurologists.
- The period through 1989 – 2000 is that of yugasandhi during which much enthusiasm will be seen to remove avanchaneeyatha and the bhavya pravah of navsrujan will be felt.
- Prakhara prathibha will develop as the fourth power along with the three powers of political power, intellectual power and money power and they will act like srujanshilpis to fight on both these fronts at the same time and will show such a courage which will be proclaimed as unbelievable. They will repeat the works of Hanuman, Angad, Arjuna etc.,
- The Prakhara prathibha will see that the new era is that of women.
- The religion of the new era will be based on the four principles of:
 1. common sense
 2. sincerity
 3. responsibility
 4. courage
- Science will no more be indulged in preparing war materials. Cities will be abandoned, big factories will be closed, cottage industries will develop and villages will be villages having all city facilities.

Sun – The Ruler of the 21st Century

- Planet earth and its unique position in the solar system.
- Earth and Sun have been described as wife and husband, the beloved and the lover etc.
- Sun rays – enthusiasm and courage

In the universe **sound, light and heat** are supposed to be the essential principles. Sun is responsible for colours and chemicals. The future depends on how much and in what way man can utilize solar energy.

- The physical aspects of Sun (Surya) – The visible fire ball, light and Heat.
- Spiritual aspects of Sun (Savita – consciousness aspect) - Light, inspiration, courage, enthusiasm.

Sun is not a material fire ball but is a conscious vital power (Prana Shakthi). When invoked, Savita is capable of giving Ojas, tejas and Varchas to the sadhaka.

- Kunthi
- Kings of Raghuvamsha
- Arthur Kosler, the great philosopher scientist in his interview with editor of Blitz Sri Karanjia, which was published in Navaneet March 1983 said, Gayatri Mantra which is the mantra of Savitri and Savita, he said when the crores of Indians in the world (*Akhila Vishwa Gayatri parivar*) chant together the Gayatri Mantra in purashcharana the resulting solar energy will completely negate the nuclear energy.
- The coming days will establish the solar science and not only will it be utilized as a material energy but as a cure for mental problems. Surya Namaskar, Surya Bhedhana Pranayam, Suryopasthan and others will give very sure and certain results which will give confidence on solar energy.

FOR THOSE WHO HAVE COMPLETE FAITH IN
THE ABOVE PROPOSITIONS A VERY
GENERAL METHOD OF UPASANA HAS BEEN
DEVELOPED.

At Brahma Muhurtha becoming pure in body and mind as far possible, close your eyes and meditate on the early morning rising golden Savita. Feel that the golden rays of the sun are entering your body and it is attaining a state of the moon. Just as the moon receiving the light from the sun and gives his cool light in the night and also pours down nectarian rays similarly the sadhaka should meditate the sun rays are entering his body and his body is full of moon light and full of nectar like light. This light is spreading throughout the world and in this nectarian light the entire environment is filled. Every substance and living being is blessed with this light useful and noble atmosphere is being established and all unwanted things are thrown away.

Gayatri Mantra is the mantra of Surya. Therefore those who have faith in Gayatri mantra can go on chanting mentally Gayatri mantra along with the above meditation. Those who do not like Gayatri mantra can just invoke the sun rays into their bodies and can visualize their body becoming moon like and the nectarian light is shining through them into the surrounding atmosphere.

Fifteen minutes is allotted for this meditation so that all can easily practice this regularly. The same emotion at the same time is practiced by lakhs and crores of people collectively the combined power that is generated and attracted from the consciousness aspect of the sun can definitely give a great boon and grace to the planet earth.

- Making sea water potable and utilizing sun as the main energy source will be the two main achievements of the 21st century. Deserts will become fertile lands.
- Because of grown up understanding between the two sexes the man power will become double.
- The waves of creativity and service will take up a cyclonic proportion and the era will be changed.
